

There is a group of users SCADA system for monitoring the automation objects,
for example "Operators»

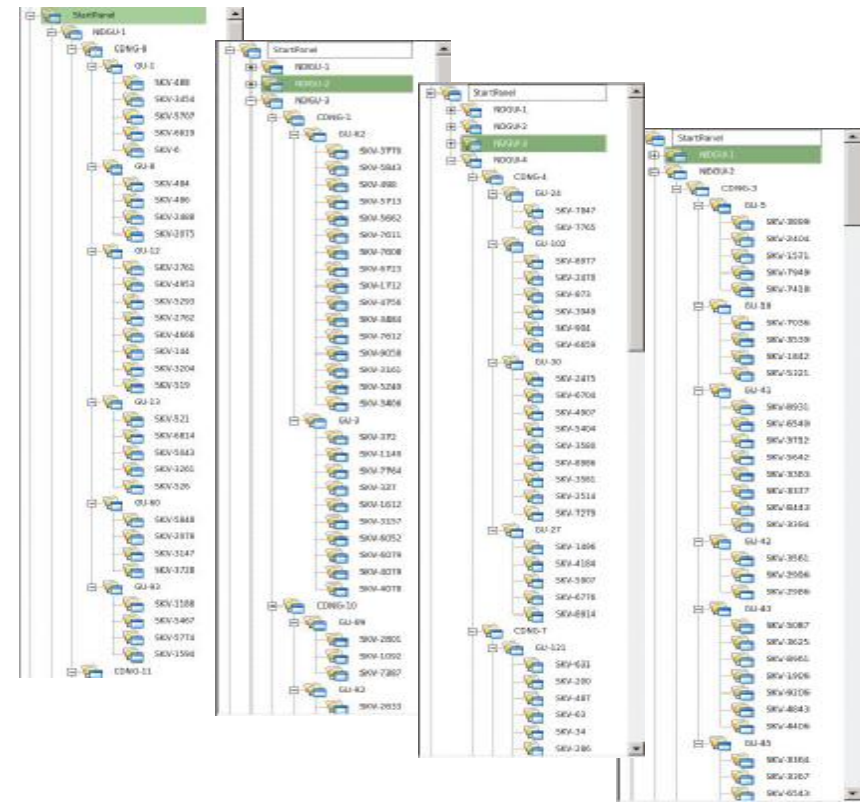

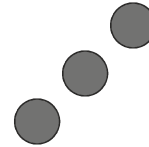

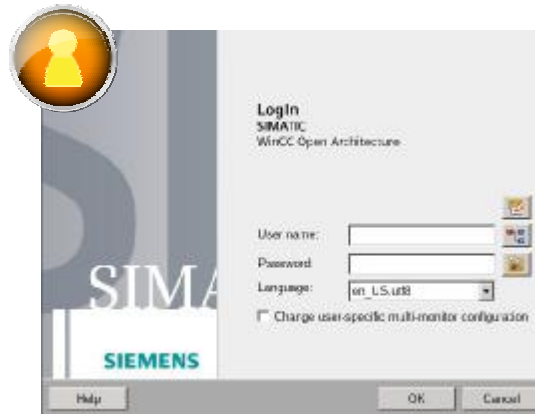

Each of the group "operator" is only responsible for his land where the facility is located

Each operator at system startup should enter under their own login and password.

And now each operator available its facilities for monitoring and control.

There is also a group of users for example: "The Boss" which should have access to information on all objects, but some functions are not available.
